DETAILED ACTION

Allowable Subject Matter

Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance:

An implantable heart stimulating apparatus and method comprising: determining whether, during a time cycle in which no stimulation signal is delivered to a second ventricle, a signal is sensed by a second ventricle sensing circuit simultaneously with a signal sensed by a first ventricle sensing circuit and determining whether a further signal is sensed in the second ventricle within a predetermined time interval of between 20 and 200 ms following the first sensed, second ventricle signal, and if both occur, storing an indication that the first sensed ventricle signal has been detected and constitutes a candidate as a far field signal as claimed are not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

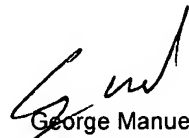

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mika et al '866 and '242 are similar to Mika et al '430 in that the references appear to show detecting far field artifacts. However, there lacks a teaching or suggestion to detect or determine whether two sensed signals occur simultaneously in both ventricles, or whether an additional signal is detected within a prescribed time interval following such a simultaneous detection.

Art Unit: 3762

Stahmann et al '650 discloses preventing cross-talk by blanking far-field signals falling within refractory periods. There lacks motivation to modify the reference to sense for simultaneous ventricular artifacts or depolarizations.
